**Legacy Stand**
The Legacy Stand pays homage to the intrinsic values of Microsoft—consisting of trees that have been maintained throughout the campus’s generation, as well as Lake Bill, which represents both the history of the Microsoft community and the region’s natural environment. The legacy stand ties together people, environmental stewardship, and spaces for innovation, amusement, and relaxation.

**Meadows**
The meadows serve to provide an experience with a variety of uses: athletics, recreation, and special events. Flanked by forest edges to the north and south, this space takes advantage of the natural topography through a gentle stepping from the higher elevation at the core of campus to the lower elevation near the eastern wooded edge. The fields are viewed as clearings in the imagined, dense forest landscape extending from the east into the campus.

**Forest Thread**
Establishing a connection to the campus’s natural context, the forest thread weaves a dense canopy of trees from the east, throughout Sammamish Village, and dissipates into the more regimented campus villages, as the landscaping likewise becomes more orderly.
